

Introduction to Networks

Task (1):

How My Phone Connects to Instagram

1. Your phone sends a request to connect to Instagram.
2. The request goes to the WiFi router.
3. The router sends it to the ISP (Internet Service Provider).
4. The ISP sends the request to Instagram server.
5. Instagram server sends the data back the same way to your phone.

Task (2):

No.	Device	Network Type	Simple Explanation
1.	Smartphone	WAN/Wi-Fi LAN	Connects to the Internet using Wi-Fi or mobile data.
2.	Laptop	LAN/WAN	Connects to a Wi-Fi router (LAN) and the Internet (WAN).
3.	Smart TV	LAN/WAN	Connects to the home Wi-Fi network to access online services.
4.	Wi-Fi Router	LAN/WAN	Connects to the home Wi-Fi network to access online services.
5.	Smartwatch	PAN	Connects to a smartphone using Bluetooth (PAN).

Task (3):

Internet	Intranet
A global network available to everyone.	A private network used by an organization.
Anyone can access it with an Internet connection.	Only authorized users can access it.
Example: Google, YouTube, Instagram.	Example: College student portal or internal college network.

Example from College

Internet:

When I connect my phone or laptop to college Wi-Fi and open YouTube or Google, I am using the Internet.

Intranet:

If my college has a private network where students can access college notices, attendance, or internal files, that is an Intranet. It is available only to college students and staff.

Topic (4):

- **How Data travels in Flipkart during a search:**
 - **When I search for “wireless headphones” in the Flipkart app, my smartphone sends the search request through Wi-Fi.**
 - **Flipkart’s server processes the search and checks its product database.**
